InSite® | *Salmonella*

Hygiena® InSite® *Salmonella* is a quick and easy test for the detection of *Salmonella* species in food processing environments. The test contains a liquid medium formulated with growth enhancers and chromogenic compounds selective for *Salmonella* species.

PERFORMANCE TESTED AOAC RESEARCH INSTITUTE LICENSE NUMBER 022302

Benefits:

- Easy to use with no preparation steps required
- Large sponge tip maximizes sample collection for accurate results
- Eliminates costly outside lab fees for an equivalent test
- Color results are easy to interpret—bright yellow indicates presence of *Salmonella* species
- Presumptive positive results in as little as 24 hours
- Negative results in 48 hours
- Self-contained tube eliminates risk of contamination, makes testing easier, faster, and more cost-effective

Sensitivity:

- Detects *Salmonella* species down to <10 CFU, even in the presence of high numbers of competing organisms

Interpretation:

- InSite *Salmonella* features a viewing window with a result chart for easy interpretation. Results are presumptive positive when the Insite *Salmonella* media turns bright yellow.

Results in the Viewing Window of the InSite Device
(This diagram shows the label laid out flat.)

Results	Medium (viewing window)	Swab Tip
Positive	Yellow	Yellow
Negative	Brown	Yellow
Negative	Purple	Yellow
Negative	Purple	Purple

Interpretation of Color Results
